Ex.No:09	FORM VALIDATION AND ROUTING USING ANGULAR JS

Objective

To create webpages for performing form validation and routing using AngularJS.

Description

● AngularJS is a JavaScript Model View Controller(MVC) framework for Web Application Developments. Used to create both client and server-side applications (Full Stack Web Application Development).

● AngularJS offers client-side form validation.

● AngularJS monitors the state of the form and input fields (input, text area, select), and
lets you notify the user about the current state.

● AngularJS also holds information about whether they have been touched, or modified,
or not.

● The ngRoute module helps your application to become a Single Page Application.

● The ngRoute module routes your application to different pages without reloading the
entire application.

Sample Code:

```
<!DOCTYPE html>
<html>
<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.6.9/angular.min.js
"></script>
<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.6.9/angular-
route.js"></script>
```

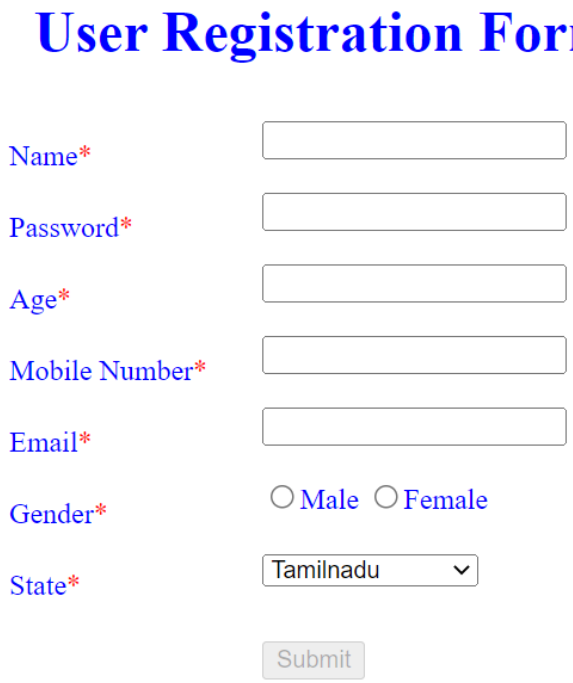

```
<script>
var app = angular.module("myApp", ["ngRoute"]);
app.config(function($routeProvider) {
    $routeProvider
    .when("/", {
        templateUrl : "main.htm"
    })
    .when("/red", {
        templateUrl : "red.htm"
    })
    .when("/green", {
        templateUrl : "green.htm"
    })
    .when("/blue", {
        templateUrl : "blue.htm"
    });
});
</script>

<body ng-app="myApp">
<p><a href="#/!">Main</a></p>
<a href="#!red">Red</a>
<a href="#!green">Green</a>
<a href="#!blue">Blue</a>
<div ng-view></div>

<p>Click on the links to navigate to "red.htm", "green.htm", "blue.htm", or
back to "main.htm"</p>
</body>
</html>
```

Sample Questions:

1. Form Validation: Design User Registration Page as per the following design and perform validation of each fields and generate error message if the field is not correct as per the following constraints
    a. All fields are required, if it is not typed show error near the box
    b. Name should not contain numbers otherwise show error
    c. Password Must Contain 1 uppercase, 1 lowercase and 1 number and minimum 8 characters otherwise show error
    d. Age should be within 18 to 30, otherwise show error
    e. Mobile number should be 10 digits, otherwise show error
    f. Email should be valid, otherwise show error
    g. Gender and state is required
    h. Finally enable the submit button if all the above fields are valid.

2. Design your own website using HTML, Angular JS Routing and CSS for any application as per your choice with minimum 4 pages and proper content including text, forms, media etc.
